

Manipulation system for ct- applications

High repeat accuracy and μ -precise reproducibility are essential requirements of manipulation systems for industrial CT applications.

JFA designs, manufactures and assembles complete manipulation systems of natural hardstone, granite, according to the demands of the customers. Special features concerning design and precision are fulfilled in single-part production as well.

Construction

Modular assembly. Base and vertical columns of natural hardstone, granite. Detector column and turn-table base are movable. Individual construction according to measurement volume to be covered.
