

## Surface line measuring device - horizontal

To be used for measuring rolls and hone tools. Accuracy < 0.001 mm

### Construction

The base plate is made of granite - natural hardstone. The workpiece is beared horizontally between the two centres. An air-cushioned slide is arranged in parallel to the axis of the workpiece. The slide is equipped with a probe for length measurement recording. Tailor-made construction.

### Measurement tasks

- › Straightness of surface lines
- › Runout

### Technical specifications

- › Centre distance: 260 mm
- › Running accuracy of slide: 0.00035 m

Other dimensions as well as modifications or enhancements on request.
